

Top 5 reasons to join DU

1. Purposeful education to make a difference
2. 'One Team, Students First' focus
3. Challenging and rewarding experience
4. Stimulating learning conditions
5. Dhofar region's magnificence and rich heritage

Have you ever wondered

1. How to create a comfortable, intellectually stimulating, and environmentally friendly habitat?
2. How to match the interior of a living or working space to culture, purpose, and taste?
3. How to transform an old structure into a landmark?
4. How a properly designed interior space contributes to the quality of life, human productivity, and sustainable development?
5. How to unleash the beauty of seemingly unattractive things?
6. How you can contribute to uplifting the human spirit in a changing world?

Wonder no more! Earning a Diploma or a Bachelor Degree in Interior Architecture Engineering (IAE) at Dhofar University will give you the opportunity to contemplate the meanings of and to find life sustaining answers to these ever so important questions.

What is Interior Architecture Engineering (IAE)?

Interior Architecture Engineering combines art and science to create a distinct, functional and eco-friendly living and working space. It seeks to improve the human condition by focusing on people's lifestyle, culture, comfort, health, and safety. In a contemporary world, people's living space extends beyond home into the office, library, museum, airport, train station, or even a shopping center. Central to the IAE activities are drawing up interior elevations, working with lighting plans, furniture selection and layout, material specifications, scheduling, color schemes, and space efficiency to maximize comfort, functionality, and aesthetic of the living space in the context of culture, anthropometrics, ergonomics, and more.

IAE at Dhofar University (DU)

The IAE Program at Dhofar University puts what is in the best interest of students, first and foremost. Every little experience the student attains represents a block in the building of a competent, confident, purposeful, problem solving, competitive, responsible, and conscientious individual. This is accomplished by means of a curriculum and facilities that conform to the highest of standards, faculty members committed to the academic and personal growth of the student, and an environment that inspires learning and drives creativity.

Career Opportunities

The Interior Architecture Engineer attains a broad spectrum of skills that pave the way for career opportunities in many professional fields. As a matter of fact, most of the major industries have interior architecture and design divisions. As interior space is always changing to suit the spirit of the times, the IAEs are needed in industries and enterprises that are involved in the interior design and/or architecture of homes, office buildings, airports, exhibitions and retail businesses. They are also required in the fields of conservation and restoration, in TV studios, museums, schools, government buildings, and even the fashion industry. Most importantly, you can imagine something

that never was and make it a reality! There is so much work to be done to guarantee the future of mankind and IAEs can tap the possibilities through the spirit of innovation and entrepreneurship.

We love to connect with you

For more information about the IAE program you are welcome to visit us any time or contact:
